

BANK CUSTOMER CHURN ANALYSIS

BUSINESS PROBLEM

The bank is seeing an increase in customer churn. I aim to analyze customer data to identify the key drivers of churn and provide actionable recommendations to improve retention

Business Questions

- Does churn differ by geography or gender?
- Does having fewer products or being an inactive member predict churn?
- Do complaints or low satisfaction scores line up with churn?
- Does card type or balance level matter

Dataset Overview

- CreditScore,
- Geography,
- Gender,
- Age,
- Tenure,
- Balance,
- NumOfProducts,
- HasCrCard,
- IsActiveMember,
- EstimatedSalary,
- Complain,
- Satisfaction Score,
- Card Type, Point Earned
- target column is Exited (1 = churned, 0 = stayed).

Data cleaning

Skim for nulls in Balance
Check for duplicates
Check data types.
Check for missing values.
Look for outliers.

Analysis Plan

- Total customers.
- Total churned customers.
- Churn percentage.
- Churn by country.
- Churn by gender.
- Churn by age group.
- Churn by tenure.
- Churn by active membership.
